

The main goals of the MÉTA Programme are the **whole country survey** and recognition of the **actual state of natural & semi-natural vegetation** of Hungary, and sound evaluation of our natural vegetation heritage.

Futher aims are

- to develop, manage and to apply **MÉTA database** (Landscape Ecological Vegetation Database & Map of Hungary)
- to drive and help collaboration of botanists, ecologist, nature scientists, civil groups and conservationists
- to develop knowledge and approach of **landscape ecology**
- to help **nature conservation** and **environmental education & awareness**.
